(57) Abstract :

ABSTRACT IMPROVEMENT OF BUSINESS INTELLIGENCE UTILIZING DATA DIGITALIZATION AND DATA ANALYTICS TECHNIQUES • Business intelligence is a broad category of applications and technologies for gathering, providing access to, and analyzing data for the purpose of helping enterprise users and enables better optimal business decisions. Business Intelligence is about getting the correct data, to the correct chiefs, at the correct time. Dynamic decision making is viably managed through an intuitive methodology, and require accurately dependent on Analytical approaches and Mathematical models. To beat the association recent concern, the new type of method is required that has insight and ability to tackle the information shortage. Data Analytics can be used to aid the objectives of a business intelligence system. Classification and patterns extraction from customer data is very important for business support and decision making. Figure 1
